Fancort Punch Press System for..... High Volume Depaneling of Tab-Routed Boards

Fancort's PC Products Division has added a new system to their growing line of PCB depaneling machines. The new system is designed for high production of tab-routed boards and incorporates a pneumatic bench press and precision tooling to separate the boards at one time by removing all the tabs.

Features:

- Pneumatic press with semi-automatic sliding base that holds the lower die for ease of loading the panel and unloading the separated boards.
- The operator activates the system allowing the bottom die to slide into place.
- Safety interlock prevents the press from cycling unless the bottom die is in position.
- After cycling the base slides out for unloading of finished boards.

Description

- **4 ton output**
- 160 x 220mm or 330 x 240mm working area (PP-4S or PP4-M)
- Two hand safety controls
- Proximity switch for safety activation
- Easy loading/unloading with moveable lower die
- Cast iron frame

Model No.

PP4

- **8 ton output**
- 240 x 350mm or 460 x 320mm working area (PP8-M or PP8-L)
- Same specifications as PP4

PP8
